

## IN THE SPECIFICATION:

Please replace the paragraph beginning at page 7, line 19 with the following rewritten paragraph:

Conventional 110V electric booster pump 50 mounted on frame 11 increases the water pressure from a well or other water source (not shown) which it receives through inlet pipe 51 (Fig. 4). Pump 50 thereafter directs the water through outlet pipe 52 which is connected to central water conduit 22 as seen in Figs. 4 and 5. High pressure water so delivered passes through spray ~~nozzles~~ nozzles (jets) 27 where it impinges pads or other items contained within tub 14 during the washing cycle.
